### FOREST AND TREE STAND SUMMARY

TS = Tree Stand	Description	% of Canopy Closure	Dominant Species	Invasive %	Average Age Within Stand (Ac.)	Stand Narrative
FS = Forest Stand						
(FS-1) - Along the East side of Frederick Road (North of Camping Ridge Road)	Mixed Deciduous	75	Black Locust Virginia Pine Honey Locust	T = 0% S = 50% H = 11% H = 11%	7.04	The Forest stand FS-1 north of the Camping Ridge Road along Frederick Road within our study area is in poor health due to lack of maintenance within the stand. The stand consists of Black Cherry, Black Locust and a cluster of Virginia Pine and Honey Locust. The understory layer includes mostly Bush Honeylocust, Japanese Honeylocust, Weiberry, Multiflora Rose and wild grasses. This segment of forest within the study area is considered a high priority area due to stream, wetland and bluffs.
(FS-2) - Along the Frederick Road (South of Camping Ridge Road)	Mixed Deciduous	90	Black Cherry Red Maple Tulip Poplar	T = 0% S = 35% H = 11%	0.46	The Forest stand FS-2 south of the Camping Ridge Road along Frederick Road within our study area is in fair health. The forest stand consists of variety of Oak species, Red Maple, Hickory and Black Cherry. The understory layer includes mostly Bush Honeylocust, Japanese Honeylocust, Weiberry, Multiflora Rose and wild grasses. This segment of forest within the study area is considered a high priority area because it is located within Clammers SPA Protection Area.
TS - East of Little Bennett Campground Entrance	Mixed Deciduous Tree Stand	90	White Oak Red Oak Red Maple	T = 0% S = 30% H = 40%	0.75	The overall forest health in this stand area is in good condition, except one (1) large Oak tree is in poor condition. The canopy layer is dominated by White Oak, Red Oak and Red Maple ranging from 6' (DBH) to 42' (DBH).
